

Company Description

Fotinakis Ltd, founded in 1962, is a leading company in the shipping industry with a focus on ship repairs, engineering studies, and shipbuilding. We have over 60 years of experience and have completed over 1000 repairs, 400 studies, and numerous ship conversions and yacht buildings. Our workforce consists of over 150 highly skilled employees who strive to achieve the best for our clients. Our goal is to combine a family environment with highly professional standards and reliability. We aim to continue to "build relationships" with our clients.

Role Description

This is a full-time on-site role for a Design Engineer. The Design Engineer will be responsible for carrying out marine engineering work, producing Computer-Aided Design (CAD) drawings, collaborating with other professionals such as mechanical engineers, and developing product design solutions that meet the needs of clients and comply with industry regulations.

The role may also involve occasional travel for **3D scanning on vessels**, requiring site visits to capture accurate data for project development.

Qualifications

- BSc Naval Architecture-Marine Engineering / Mechanical Engineering or other engineering degree
- Experience in Design Engineering and Computer-Aided Design (CAD)
- Knowledge of AutoCad
- Excellent problem-solving and analytical skills
- Ability to work as part of a team as well as independently
- Familiarity with industry regulations and standards
